

Dove Hill Farm – Endless Pool™ Main House

The Endless Pool™ in the basement is a 7' W x 14' L x 3½' D swim in place pool with a retractable cover. A synthetic coping surrounds the outside edges of the pool

The pool has a hydraulic driven propeller system that easily adjusts the water flow rate from a gentle to a vigorous 1:08/100-yard pace. The propeller-driven current remains smooth, even at its maximum speed. There are separate return channels to prevent turbulence. The heater maintains a constant water temperature. This system delivers an effective swim/aerobic workout for most fitness levels.

Features

- Pool is partially recessed into basement floor to provide easy access
- Floor drain beneath the pool to outdoors. Drains deck & protects against water damage.
- The custom pool skirting and surrounding decking is made of ipe, a Brazilian walnut, resistant to water damage. Even better than teak.
- Synthetic pool coping.
- Modular, steel-panel construction with interior bench seat
- 5 HP hydraulic motor and pump to power propeller for water flow
- High-efficiency circulating pump with basket strainer
- Air pressure activated digital systems control
- Skimmer return water filter
- Cartridge filter at circulating pump
- Hydrotherapy spa jets
- Electric pool water heater, thermostatically controlled
- Intermatic 24 hour timer switch controls filtration pump
